Maturing consists in giving a certain product a specific period of rest in suitable climatic conditions, so that it quickly reaches an **optimal result** in terms of **organoleptic qualities, aroma, fragrance and flavour. These are the PHASES of the process:**

- **Stewing or Draining** : lasting a few hours, it helps the aromas spread throughout the meat.
- **Drying** : lasts about 6 days; during this period, the product loses a large amount of excess water, which must be as uniform as possible, avoiding the hardening of the external casing.
- **Maturing** : it lasts a variable amount of time based on the type of product; during this period, good regulation of humidity helps the formation of natural enzymatic phenomena, 'good moulds', which favour the complete maturation of the product, thus guaranteeing its conservation and healthiness.

The seasoning cabinet enhances your artisanal product during the delicate seasoning process, controlling humidity and ventilation the system guarantees an ideal seasoning climate for up to 200 kg of cured meats in just 30 days.
