TERMOREGOLATORE

TERMOREGOLATORE DIGITALE (DI SERIE)

TERMOREGOLATORE A CONTROLLO REMOTO (OPTIONAL)

Tramite il termoregolatore digitale è possibile settare la temperatura, azionare la ventilazione interna, accendere le luci, attivare il ciclo di sbrinatorio manuale ed accedere ai parametri che regolano il funzionamento della vetrina. Il termoregolatore a controllo remoto aggiunge la possibilità di collegare la vetrina al WiFi e permette di controllarla tramite l'applicazione Expo ConneX. Un sistema di connessione all'avanguardia consente ai nostri tecnici di fornire assistenza da remoto in qualsiasi parte del mondo il prodotto si trovi.

IMPIANTO A REFRIGERAZIONE CENTRALE BREVETTATO

Rappresenta una rivoluzione nel campo della termodinamica applicata. È il primo frigorifero al mondo con serpentina di evaporazione al centro del vano refrigerato, un perfetto equilibrio termico. L'evaporatore diventa un supporto. Tutte le bottiglie sono poste alla stessa distanza dalla fonte del freddo. Il sistema di condensazione ventilato a pala premente è posizionato all'interno della base.
