STANDARD

La serpentina di raffreddamento ❶ e le ventole di aereazione interna ❷ sono inserite al centro della vetrina all'interno dei pannelli di alluminio. Il compressore ❸, il condensatore orizzontale con ventola a pala premente ❹ e la vasca per l'evaporazione della condensa ❺ sono inseriti in una speciale vasca ribassata. Con questa soluzione, pur installando un compressore standard, l'altezza della base è limitata (150 mm) in quanto viene utilizzato lo spazio inferiore dove sono inseriti i piedi (40 mm). La circolazione dell'aria di condensazione avviene dalla parte inferiore frontale.

The cooling coil ❶ and the internal fans ❷ are installed in the middle of the cabinet inside the aluminium panels. The compressor ❸, the horizontal condensing unit, the pushing fan ❹ and the vat for the evaporation of the condensation water ❺ are placed in a special lowered tank. With this solution, despite installing a standard compressor, the height of the base is limited (150 mm) as it takes up the lower space where feet are located (40 mm). Condensation air circulates from the bottom front part.

Le serpentin de refroidissement ❶ et les ventilateurs internes ❷ sont insérés au milieu de la vitrine à l'intérieur des panneaux d'aluminium. Le compresseur ❸, l'unité de condensation horizontale, le ventilateur avec la lame à pression ❹ et le bassin de l'évaporation de l'eau de condensation ❺ sont placés dans une cuve speciale rebassée. Avec cette solution, même avec un compresseur standard, la hauteur de la base est limité (150 mm), car on utilise l'espace inférieur où se trouvent les pieds (40 mm). La circulation de l'air de condensation est soufflé à travers la partie inférieure avant.
